*In transcribing from the scans of the handwritten record, spellings and abbreviations have been used as written, even where today considered incorrect. For example the word "their" in modern form is spelled as "thiere" throughout the earlier part of the records. Many pages have eroded edges, so any missing words or those that are illegible, are represented by .....*

*Some of the pages are numbered in blue pencil at the top, from which it is evident some may be missing in the originals or scans, or missed in the numbering series, viz. pages 5, 6, 12, 13, 17, 18, 21, 77, 183, 184. However, it is also clear that this numbering system is not an exact series, many cannot be read, and those that can do not make a systematic series. Those highlighted below in green are definite. Pages 15 and 16 are out of order, the page numbers 16 and 23 were each used twice.*

*In the main transcription below, both "Page No." and "Scan No." refer to the BL scans. "Page No." refers to the apparent page number when this can be deciphered from the scan. "Scan No." refers to the number of the scans covering the original page – usually two scans, but only one for those with a small amount of text, with the remainder of the page blank.*

*The indices at the end of the document use the page numbers at the bottom of each page in this transcription, not those from the original document given in the first column.*

*The account describing the arrival of a slave ship on 16<sup>th</sup> February 1680/1 is out of order in the scans, coming after the account for 15<sup>th</sup> April 1681.*
